Thinking about a brighter future with LEDs

Global warming, dwindling natural resources, eco-systems in peril ... we live on a planet facing serious environmental challenges. At Juno Lighting Group, we have been working hard to develop lighting solutions that can have a positive effect on our situation.

We believe the answer lies in LEDs. A modern miracle, LEDs use as little as 15% of the energy of conventional lighting, project virtually no heat, and last a remarkable 50,000 hours or more. They contain no toxic mercury, lead, or PCBs. There are no damaging IR emissions; no disposal issues. Clearly, LEDs represent the most energy-efficient, eco-friendly light source the world has ever seen.

That's why we have made a major commitment to LED technology. From residential to retail, from recessed to track lighting, our extensive range of LED fixtures are designed to save energy, reduce operating costs and minimize environmental impact.

We like to say we are "EcoLEDgy Driven," which reflects our ongoing program to address the environmental challenge through advanced LED products. We've been thinking about a brighter future with LEDs ... we think everybody should.

And when you think LED ... think Juno Lighting Group.

The *Big Idea* in residential lighting

LEDs are the biggest story in residential lighting today. They use far less energy, last much longer, and are more eco-friendly than any other light source. Juno Lighting Group leads the industry with LED fixtures for inside, outside, and all-around the house. From brilliant recessed luminaires, to versatile track lights, to stunning decorative pendants, we have LED solutions for every décor. And when it's time to think small, our miniaturized LED fixtures can illuminate cabinets, counters, and every nook and cranny.

LED fixtures are recessed in the ceiling, mounted beneath cabinets, and suspended above the pass-through of this contemporary kitchen, providing exceptional illumination with a sense of style.

Rethinking retail lighting

LED fixtures from Juno Lighting Group have ushered-in a new era in retail lighting. Gone are the days of energy-hungry, smoldering-hot display lighting. LED fixtures save energy, and their cool operating temperatures create a comfortable in-store environment. Retailers can reduce lighting and HVAC energy costs and, thanks to ultra-long LED service life, can reduce maintenance costs as well. Recessed, track, or linear ... accent, wall wash, or task lighting ... our extensive product offering will have you thinking LED.

LED accent and wall-wash lighting make product displays pop, while creating a cool, comfortable environment in this upscale retail establishment.

Commercial lighting ... thinking inside, outside, and all-around the box

LED luminaires from Juno Lighting Group are providing innovative lighting solutions for corporate offices, general offices and commercial facilities across the country. And it's no wonder. Our ever-growing LED product family is designed to enhance workplace efficiency and productivity, while simultaneously reducing energy and maintenance costs. Every fixture is engineered down to the smallest detail to create the perfect aesthetic and ensure optimum performance. Exceptional energy efficiency means code compliance and green initiatives can be met with ease. It's why good corporate citizens are thinking LED.

Recessed LED fixtures blend seamlessly into this corporate office setting and produce the sought-after "quiet ceiling" look. The LED exit signs cost just pennies to operate and provide years of maintenance-free service.

Hospitality extraordinaire

Style, flair, and dramatic spaces ... these are the hallmarks of the hospitality industry. And it's the type of environment in which LED fixtures from Juno Lighting Group perform at their shining best. From restaurants to reception areas to hotel rooms, our LED luminaires excel at showcasing architectural details, distinctive materials, artwork, and unique décors. Whether creating spaciousness or intimacy, LED light will enhance your guests' experience. And you'll appreciate the substantial savings in energy, maintenance and operating costs.

LED cove lighting and wall washing lends high drama to this striking hotel lounge area.

Attending to the health of the healthcare industry

In hospitals, clinics and doctors' offices, LED fixtures from Juno Lighting Group help create ideal working conditions and a comfortable patient environment. They produce the high levels of bright-white light required by medical facilities. And since LEDs contain no dangerous toxins or glass that could shatter, they add an extra measure of safety and security. Our LED product family offers high-performance lighting for a broad range of healthcare applications ... all designed to contain the costs of energy and maintenance. It's a healthy solution all around.

LED downlighting in this medical office reception area offers effective task lighting, as well as pleasant surroundings for patients.

Illuminating the great outdoors

When you need to turn night into day, Juno Lighting Group offers LED solutions for a variety of outdoor applications. Architectural or security lighting, wall- or bracket-mounted fixtures, pathway bollards or step lights ... our rugged outdoor LED products are designed to withstand the harshest conditions. Incredible energy efficiency reduces operating costs, and extraordinary service life yields many years of maintenance-free use. LEDs have even been reported to attract fewer flying insects, making the great outdoors that much greater.

LEDs are right at home in the great outdoors, providing energy-efficient, low-maintenance illumination for parking lots, pathways, and building security.

Thinking about a brighter future ... together

Juno Lighting Group is a unit of Schneider Electric, one of the world's largest companies and a leader in energy-management solutions. Together, we lead the industry in advanced lighting products and lighting controls. And we share a common goal: to produce products of exceptional quality that reduce our impact on the environment.

Our focus on LED technology has resulted in a large and ever-expanding family of lighting products that offer unprecedented levels of energy efficiency. By reducing energy consumption, LEDs help reduce the greenhouse gas emissions that contribute to global warming. In addition, LEDs contain no toxins of any kind, making them the ultimate eco-friendly light source.

By adopting advanced technologies like LEDs, we can all do something to secure the future of our planet. At Juno Lighting Group and Schneider Electric, we will continue to take a proactive role.
