Juno Lighting Group Introduces Indy Architectural 2 x 2 LED Luminaires

Architectural grade commercial lighting solution incorporates eye-catching designs with energy efficient technology

Des Plaines, Ill., May 12, 2010 — Juno Lighting Group®, a subsidiary of Schneider Electric, and a leader in high-quality, innovative commercial and residential lighting solutions, today announced that its Indy™ product line will introduce a high performance series of architectural 2 x 2 LED luminaires. Illuminated by Cree TrueWhite™ Technology, the Indy 2 x 2 offering uses up to a third less energy and provides five times the service life of equivalent fluorescent lighting, providing commercial users with a highly efficient recessed lighting option that reduces overall costs and conserves energy.

Measuring two-foot square, the fixtures offer a true architectural-grade appearance in standard drop-ceiling commercial installations such as offices, schools, hospitals and retail establishments. The one-foot square LED light panel is regressed into the fixture, providing reduced glare and a quiet ceiling appearance. Powered by Cree TrueWhite™ technology, which produces a superior-quality white light by combining yellow and red LEDs, the Indy 2 x 2 luminaires offer a CRI of 90 and color temperature of 3500K, with remarkable fixture-to-fixture consistency.

Other features of the Indy 2 x 2 LED luminaires include:

- Two stylish architectural designs – Parabolic and Stepped
- 3200 or 3800 lumen output utilizing only 44 or 52 Watts respectively
- Dimming to 5% using 0-10V control protocol
- An advanced thermal management system that disperses heat to keep LEDs at optimal temperatures
- 50,000 hours life at 70% lumen maintenance
- High ambient light levels with a fixture efficacy of 73 lumens per watt

“The Indy 2 x 2 LED fixtures are distinctive in design and provide commercial specifiers with a high performance, attractive architectural-grade lighting solution for a variety of environments,” said Jeff Spencer, director of
